

Canada/USA Mathcamp ([www.mathcamp.org](http://www.mathcamp.org)), established in 1993, is a residential summer program for talented high-school students who want to study advanced mathematics.

## Nuts and Bolts

**Setting:** We run one 5-week session per year, rotating annually between several campuses. In 2023, we held our program at Champlain College in Burlington, Vermont.

**Participants:** 115–125 students, ages 13–19, eligible through the summer before college.

**Geographic draw:** Worldwide; about 83% U.S., 5% Canada, 12% international students.

**Gender balance:** Average over the last five years: 43% girls, 3% non-binary, 54% boys.

**New/Returning:** We reserve 65 places each year for new students and 55 places for returning alumni.

Many students return year after year and call Mathcamp their home. In the last five years, 63% of our students came for 2+ years, and 19% came for 3+ years.

## Admissions and Financial Aid

The **admissions process** centers around a rigorous entrance exam: an open-resource, untimed, two-month project that often asks students to learn new material. Some of the applicants are self-taught; others are already taking university courses. Regardless of their resources at home, we endeavor to identify a wide range of outstanding students for whom Mathcamp will be transformative.

**Statistics:** We admit fewer than 10% of new applicants (in 2023: 74 out of 866), with 85–90% yield (in 2023: 65 out of 74 enrolled). Returning alumni need not reapply.

**Financial Aid:** We fully meet the demonstrated need of every student, both new and returning. We award full scholarships as well as domestic and international travel grants.

**Admission is need-blind.**

## Program Activities

**Math:** From 9am to 5pm, the academic day is filled with classes, talks, and office hours. We offer 100+ courses each summer, covering material typically only encountered in college or grad school. Topics range from fundamental subjects (e.g. linear algebra and group theory) to active areas of research (e.g. cluster algebras and algebraic geometry), with a new set of courses each summer. Students may choose to work on mentored projects, which include directed readings, research, and applications.

**Individualized Curricula:** A defining feature of Mathcamp is that each student designs their own schedule (with guidance of an academic advisor). A student particularly interested in Topology might fill their schedule with classes on that topic; another might choose an assortment from different fields each week. The ever-changing course offerings can challenge students who return for many years.

**Staff:** A group of highly dedicated graduate students serve as "mentors" in a combined teaching/camp counseling role, alongside a handful of faculty members. These instructors are selected for their passion for mathematics and teaching, and (like the students) often return from year to year. In this immersive environment, they interact with students in many contexts: classes, office hours, meals, field trips, and informal activities.

**Outside the classroom:** Students live in college dorms and have free access to the campus. There is no wake-up call or lights out; students are responsible for their own schedule (and their own laundry!). Evenings and weekends are filled with opportunities for creativity and community-building: singing, board games, cooking, hiking, crafting, working on math, or simply relaxing. Many activities are organized by the students themselves.
